Full Stack .NET Developer | Backend Lead | Punjab Govt. NIC Projects

PROFESSIONAL SUMMARY

Full Stack .NET Developer with 5+ years of experience in designing, developing, and deploying enterprise-scale applications for Government of Punjab (India) NIC projects through vendor companies (Velocis Systems & Akiko Sherman). Expertise in C#, .NET, MVC, Minimal APIs, N-Layer Architecture, Clean Architecture, Docker, Kubernetes, React, Next.js, and PostgreSQL. Strong background in backend architecture, database design, API development, reusable library development, and IIS/Linux deployments. Currently contributing to the Bhakra Beas Management Board (BBMB) enterprise platform and developing FlowCore, a reusable .NET library designed for installation and use across multiple projects.

WORK EXPERIENCE

Senior .NET Developer (Full Stack & Lead)

Akiko Sherman Infotech Pvt. Ltd. (Vendor to NIC Punjab) | Jun 2024 – Present | Punjab NIC, Mini Secretariat

- Leading the development & ongoing enhancements of SPORTS Project (Jun 2025 – Present), a state-level platform for player registrations, tournament participation, certificates, and awards.
- Managing LBPAMS (May 2024 – Present) – Local Bodies Poll Monitoring System for Nagar Panchayat, Zila Parishad & Municipal elections.
- Designed and implemented full-stack solutions using C#, .NET, Minimal APIs, MVC, React.js, Next.js, Tailwind, PostgreSQL, Entity Framework, Docker, and Kubernetes.
- Deployed and supported applications on Linux servers using Docker and Kubernetes.
- Currently working on the Bhakra Beas Management Board (BBMB) enterprise platform, involving 13 modules and a Microservices + Clean Architecture approach.
- Developing FlowCore, a reusable .NET library/package that can be installed and integrated into multiple .NET projects to standardize and reuse common application capabilities.

Tech Stack: C#, .NET 8/9/10, Minimal APIs, MVC, React.js, Next.js, Tailwind, PostgreSQL, Entity Framework, Docker, Kubernetes, IIS, N-Layer, Clean Architecture, Microservices, Reusable .NET Libraries

.NET Backend Lead Developer

Velocis Systems Pvt. Ltd. (Vendor to NIC Punjab) | Jul 2022 – May 2024 | Punjab NIC, Mini Secretariat

- Architected and developed PAMS (Aug 2023 – Mar 2024) – Election monitoring system for Vidhan Sabha & Lok Sabha elections.
- Designed N-Layer architecture & database schema, built backend APIs with C#, .NET 8, Entity Framework, LINQ, MVC, and integrated PostgreSQL, Redis, SignalR for real-time data.
- Deployed applications on IIS Manager and handled production rollouts.
- Received Appreciation from CEO Punjab for successful PAMS implementation.

Tech Stack: .NET 8, MVC, N-Layer, PostgreSQL, Redis, SignalR, Entity Framework, IIS, LINQ

Web Designer / Junior Developer

Triitans Solitaire Pvt. Ltd. | Jul 2021 – Jun 2022 | On-site

- Designed and developed 5–6 responsive websites with HTML, CSS, Bootstrap, jQuery, JavaScript.
- Collaborated with design team for UI/UX improvements and ensured cross-browser compatibility.

Tech Stack: HTML, CSS, Bootstrap, jQuery, JavaScript

EDUCATION

B.Tech – Computer Science & Engineering
Kurukshetra University | 2017 – 2021 | 72%

KEY PROJECTS

- SPORTS Management System (2025 – 2026, NIC Punjab) – Full-stack development, player registration, tournament participation, certificates, awards, and government scrutiny workflows.
- LBPAMS (2024 – Present, NIC Punjab) – Local Bodies Poll Monitoring System for Nagar Panchayat, Zila Parishad & Municipal elections.
- BBMB Enterprise Platform (2025- Present, NIC Punjab) – Working on a 13-module enterprise solution using Microservices and Clean Architecture principles.

- FlowCore (.NET Library, Current) – Developing a reusable library/package that can be installed across multiple .NET projects for shared and standardized application functionality.
- PAMS (2023 – 2024, NIC Punjab) – Election monitoring system for Vidhan Sabha & Lok Sabha elections.

NIC PUNJAB INTERNAL PROJECTS

SMS Management System

Jul 2025 – Aug 2025

- **Led the project team** and designed a centralized **SMS gateway management system** for Punjab government departments lacking in-house SMS integration capabilities.
- Built using **.NET 9 Web API (Minimal APIs)** with **Server-Sent Events (SSE)** for **real-time delivery status updates**, and **React + Next.js** for the frontend.
- Enabled departments to:
 - Register with NIC SMS Gateway credentials (ID/Password).
 - Create and manage **SMS templates** with mandatory template & recipient list selection.
 - Manage contact groups (**single, selected, or bulk lists**) with multi-list support.
 - Schedule SMS campaigns (**one-time, bulk, recurring**).
 - Send SMS instantly with **real-time status tracking**.
- Simplified bulk communication for government departments, eliminating the need for custom SMS module development.

CURRENT & INTERNAL PROJECTS

Bhakra Beas Management Board (BBMB) – Current

- Working on a 13-module enterprise platform using Microservices + Clean Architecture principles for scalability, maintainability, and modular development.
- Key planned/active modules include Finance, ID Card Management, Fund Management, Accounts, and other operational units.
- Designing interconnected services with shared data capabilities to support secure and consistent data flow across departments.

- FlowCore – Designed and developed FlowCore, a reusable .NET framework for standardized file movement and workflow processing. The framework provisions 4–20 related database tables under dedicated schemas and exposes workflow capabilities through interfaces. Consumer applications integrate the library via NuGet, implement their APIs, and consume the framework's business logic through defined abstractions, reducing duplicate implementation and promoting consistent architecture across projects..

PERSONAL PROJECTS

OmMedia Solution (06/2024 – 07/2024)

- Designed and developed a **family business management system** for a printing company using **.NET 8 Web API, PostgreSQL, and Blazor WebAssembly**.
- Implemented **client registration & management** (name, company, email, phone).
- Automated workflow: employees capture client requirements with photos → operator receives work details (quantity, type, etc.) → accountant generates invoice → email notification sent to client.
- Built **employee management module** to track staff roles and interactions.
- Improved efficiency by reducing manual coordination between employees, operator, and accountant.

OmMedia Mobile App (06/2024 – 07/2024)

- Developed a **Blazor Hybrid MAUI mobile app** integrated with the main system.
- Allowed employees to **capture photos of client requirements directly via mobile** and submit them in real-time.
- Synced seamlessly with backend operator panel for faster work initiation.
- Enhanced customer experience by ensuring quicker order processing and digital record-keeping.

SKILLS

Backend: C#, .NET Core 7/8/9, .NET 10, ASP.NET MVC, Minimal APIs, Web API, Entity Framework, LINQ, Microservices, Clean Architecture, N-Layer Architecture, Reusable .NET Libraries

Frontend: React.js, Next.js, Tailwind, Bootstrap, HTML5, CSS3, JavaScript, jQuery, Blazor

Databases: PostgreSQL, SQL Server, Redis

DevOps / Tools: Docker, Kubernetes, IIS Manager, Jenkins, Git, Azure DevOps (basic)

Deployment: Linux & Windows server deployments, Dockerized containers, Kubernetes

ACHIEVEMENTS

- Appreciation from CEO Punjab for successful implementation of PAMS Project.
- Successfully led full-stack + backend teams for NIC Punjab projects with 100% on-time delivery.
